

## Cell Balancing Transformer

**Extension of the the driving time of each charging**

Energy efficiency of module is raised by equalizing the voltage in each cell of the rechargeable battery module.

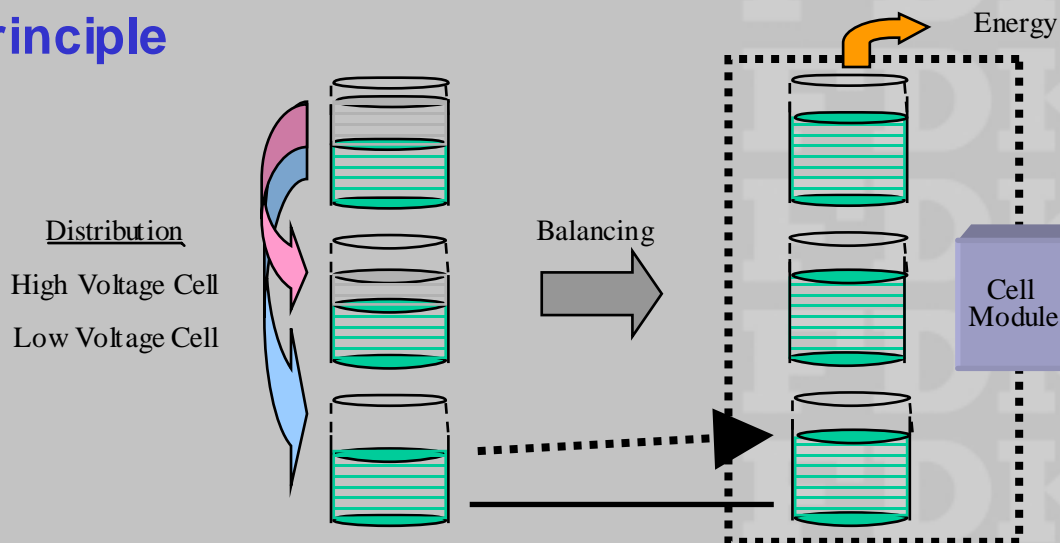

### ■Feature

- Equalization of output voltage by the new structure (Output Voltage 1% which is 1/3)
- Extendible through Module Stack Structure

### ■Application

- Nickel hydride battery 16 serial / module
- Lithium-ion battery 12 serial / module

### ■Principle

The descriptions in this catalogue are subject to change without notice.
